

One Source for Precision Fibrous Parts

Surface Finishing Products for Orthopedic Implantable Components & Major Medical Manufactured Products

Spartanburg, SC—**Spartan Felt Company** has announced major development and manufacturing efforts for its polishing bob, wheels, and pads to accommodate the precision needs of the medical device manufacturing industry. Precision machine shops that provide mold-making services as well as metal and plastic implant manufacturers have a need for abrasive polishing products.

Polyester
Resin Enhanced
Embossed (lg)

Spartan Polishing Bobs incorporate built-in abrasives such as aluminum oxide, silicon carbide, or diamond to make light deburring, pre and final polishing faster, cleaner and more efficient. These compound impregnated felt bobs provide shorter polishing time than plain felt bobs and a cleaner process. Abrasive size, concentration and bulk hardness are strictly controlled resulting in consistent product from lot-to-lot.

Let **Spartan Felt Co.** customize a soft, medium, hard, rock, or flint hard bob with the applications-specific composition for your medical application. Spartan also offers other mounted specialty products and abrasive wheels and polishing pads. Please contact us at:
